Adjusting Observations Of A Chiropractic

Chiropractic adjustment Chiropractic adjustment is a procedure in which trained specialists (chiropractors) use their hands or a small instrument to apply a controlled, sudden force to a spinal joint. The goal of this procedure, also known as spinal manipulation, is to improve spinal motion and improve your body's physical function.

Instrument adjusting overview - chiroeco.com

The most common reaction to a chiropractic adjustment is aching or soreness in the spinal joints or muscles. If this aching or soreness occurs, it is usually within the first few hours post-treatment and does not last longer than 24 hours after the chiropractic adjustment. Application of an ice pack often reduces the symptoms relatively quickly.

Chiropractic Adjustment - Spine-health

An adjusting instrument using a spring-loaded stylus. Once a patient has been convinced that his or her spine harbors vertebral subluxations that can cause disease or affect general health, any one of dozens of chiropractic adjustive techniques might be used to correct and prevent recurrence of such subluxations.

Questions and Answers about Chiropractic: The Bottom Line ...

The Ozark Chiropractic Clinic uses a special hand arrangement to deliver the correct thrust in the right place on your body. This arrangement is called a “pisiform contact” and the style we use for adjusting your spine is commonly called “Diversified.”. Before we begin any treatment, an initial analysis of your spine is made which can include visual observations, x-rays of your spine, and a review of your case history.
