Updated August 31, 2020 A derivative is a financial contract that derives its value from an underlying asset. The buyer agrees to purchase the asset on a specific date at a specific price. Derivatives are often used for commodities, such as oil, gasoline, or gold. 1 Another asset class is currencies, often the U.S. dollar.

arbitrage opportunities in financial markets. The module focuses on futures and forwards on bonds and stocks, swap contracts and stock options.

### **ECON6054 | Financial Derivatives | University of Southampton**

Financial derivatives, as mentioned above, are contracts that base their value on an underlying asset. In them, the seller of the contract does not necessarily have to own the asset, but can give the necessary money to the buyer for it to acquire it or give the buyer another derivative contract. These financial derivatives are used to hedge investments and to speculate.
