In order to retrieve data saved in unicode format, M\$ suggest users to cast columns to binary data. Unfortunately php_mssql extension doesn't support binary data to be returned in string columns. My advice is to use FreeTDS driver [it's just an php extension]. This driver seems to handle unicode data better.

If someone encounters the interesting problem in which PHP can connect to a MSSQL server from the command line but not when running as an Apache module: SELinux prevents Apache (and therefore all Apache modules) from making remote connections by default.

PHP: mssql_connect - Manual

The MSSQL documentation states that binary constants should be represented by their unquoted hexadecimal byte-string. That is.. to set the binary column "col" to contain the bytes 0x12, 0x65 and 0x35 you should do "col = 0x126535" in you query.

PHP: mssql_query - Manual

On Windows, if you're using MSSQL 2005 or greater you must copy the ntwdblib.dll into the directory where you have installed php and overwrite the one thats already in there. This is due to the version distributed is old and outdated.
