year are Cassiopeia,  
Cepheus, Draco, Ursa  
Major, and Ursa Minor.

## **Circumpolar constellations - Constellation Guide**

In astronomy, a  
circumpolar  
constellation is a  
constellation (group of  
stars) that never sets  
below the horizon, as

# File Type PDF The Circumpolar Constellations

viewed from a location on Earth. Due to Earth's rotation and axial tilt with respect to the Sun, the stars and constellations can be divided into two categories. Those stars and constellations that never rise or set are called circumpolar.

## And The Egyptian **Zenith, North Celestial Pole and Circumpolar Constellations**

These are the circumpolar constellations, the ones that, although their positions do change with time, they seem to travel in a circle centered at the sky's north pole, and are always visible from our northern latitudes.
